How do I add a lens to an existing report?

You can use the `addLens()` method to add a lens to an existing report:

```
\Aero\Admin\Reports\Implementations\SalesReport::extend(function
(\Aero\Admin\Reports\Implementations\SalesReport $report, \Closure $next) {
    $report->addLens(\Aerocargo\Acme\Lenses\TotalRevenueLens::class);

    return $next($report);
});
```

```
class TotalRevenueLens extends \Aero\Admin\Reports\ReportLens
{
    protected function value(): \Aero\Cart\CartPrice
    {
        $totalRevenue = \DB::query()
            ->fromSub($this->query, 'results')
            ->selectRaw('SUM(results.revenue + results.tax) as total')
            ->value('total');

        $currency = request()->store()->currency;

        return new \Aero\Cart\CartPrice($currency, $totalRevenue * 100);
    }
}
```

Where the lens added extends `\Aero\Admin\Reports\ReportLens`:

```
class TotalRevenueLens extends \Aero\Admin\Reports\ReportLens
{
    protected function value(): \Aero\Cart\CartPrice
    {
        $totalRevenue = \DB::query()
            ->fromSub($this->query, 'results')
```

```
            ->selectRaw('SUM(results.revenue + results.tax) as total')
            ->value('total');

        $currency = request()->store()->currency;

        return new \Aero\Cart\CartPrice($currency, $totalRevenue * 100);
    }
}
```

> `$this->query` is a copy of the report query, the `value` method must return a string (or stringable).
