

How do I add custom data to a transformer?

You can add a custom field using the `add()` method and returning an array:

```
\Aero\Admin\Transformers\ProductTransformer::add(function ($data) {  
    /* @var \Aero\Catalog\Models\Product */  
    $product = $data['product'];  
  
    return [  
        'foo' => 'bar',  
    ];  
});
```

You can add a cast using the `addCast()` method:

```
\Aero\Admin\Transformers\ProductTransformer::addCast('acme', 'integer');
```
