How do I manage shipping options for my product?

In order to update your products shipping options, first you will need to navigate to the product in the admin. To do this use the "Catalog Management" menu and locate the "Products" button.

Where the shipping options are located on this page will depend on if the product is a sigular or a product with variants.

If your product is **singular**then you will need to scroll down to the "**shipping**" section.

If your **product has variants**then you will need to scroll down to the "**variants**" section.

There are a number of fields available in these sections that all relate to the shipping options of your products.

- **This is a physical product and requires shipping**- this checkbox is selected by default however if you're selling a digital product that does not require shipping this box should be unticked. - **Weight**- the weight field is used to calculate the shipping cost of the item. - **Harmonized system code**- These codes are a standardized numerical method of classifying traded products. It is used by customs authorities around the world to identify products when assessing duties and taxes and for gathering statistics. - **Country of origin**- this is the country from which the item will be shipped and used to calculate shipping costs.
