

How do I obtain package repository credentials?

Once logged in to Agora, head over to the projects section and click the New project button. You'll need to give the project a name, for example, the website name or your client's company. In the example below, we've used a fictional company of "Acme Inc".

A domain is optional at this point; you can enter this later when the project is ready to go live. Click the "create new project" button to create the project.

DocumentationOrganizations >ProjectsPackages
