

How do I set the response status code?

There may be situations where the HTTP response status needs to be altered. By default, the returned status is **200**, however, this can be changed by passing the new status code to the `**setStatus()` method:

```
\Aero\Store\Http\Responses\ProductPage::extend(function ($page) {  
    $page->setStatus(403);  
});
```
