

What is a bulk action?

A bulk action allows for the selection of multiple values from a list, and apply some logic to items that have only been selected. Bulk actions exist for many different **Resource Lists**, which is what is used for determining items that have been selected.

Bulk actions are usually dispatched as a job, given the bulk nature of the action, which carries out tasks in a sequential manner. There are exceptions to this rule however and Aero can also return responses straight to the browser, e.g. downloading all selected content blocks as a .zip.
