

How can I intercept discount code handling?

You can use the `addCodeHandler()` method to add a discount handler to the cart, it will run the provided callback whenever a code is added to the cart:

```
\Aero\Cart\Cart::addCodeHandler(function (\Aero\Cart\Cart $cart, string $code) {  
    if ($code === 'acme') {  
        // Do external stuff...  
  
        return true;  
    }  
  
    return false;  
});
```

Return `true` to handle the code yourself. Return `false` to let the Cart handle it normally.
