

How do I change the response view?

For responses that return HTML, a Twig view file is used. Whilst these are originally defined, the view can be changed. For example, to change the product page view based on product data:

```
\Aero\Store\Http\Responses\ProductPage::extend(function
(\Aero\Store\Http\Responses\ProductPage $page, \Closure $next) {
    if ($view = $page->product->additional('view')) {
        $page->setView($view);
    }

    return $next($page);
});
```

Setting the view to `null` will result in a JSON response.

You can get the current view for a response using `getView()`.
