Breadcrumb

Breadcrumb

- How do I access the breadcrumb?
- How do I manipulate the breadcrumb?

How do I access the breadcrumb?

To access the breadcrumb on the storefront, use the `breadcrumb()` function inside Twig files:

```
<ul class="breabcrumb">
    {% for crumb in breadcrumb() %}
        <li class="crumb">
            {% if loop.last %}
                <span>{{ crumb.name }}</span>
            {% else %}
                <a href="{{ crumb.url }}">{{ crumb.name }}</a>
            {% endif %}
        </li>
    {% endfor %}
</ul>
```

How do I manipulate the breadcrumb?

The breadcrumb can be manipulated from within a PHP file. Typically, this will either be on an existing Aero route such as the homepage or product page, or a new route that is custom to the project or module.

Adding to the breadcrumb

To add crumbs to the breadcrumb:

```
\Aero\Store\Facades\Breadcrumb::add(function ($breadcrumb) {
    $breadcrumb->add(new \Aero\Store\Crumb('Name', '/url'));
});
```

Clearing the breadcrumb

To clear all crumbs from the breadcrumb:

```
\Aero\Store\Facades\Breadcrumb::clear();
```

Filtering the breadcrumb

A filter can be specified to control if certain crumbs should be removed from the breadcrumb. The function should return a **boolean**which indicates if the crumb should be kept:

```
\Aero\Store\Facades\Breadcrumb::setFilter(function ($crumb) {
    if ($crumb->getName() === 'Foo') {
        return false;
    }
```

```
    return true;
});
```

Disabling the request referer

By default, the product page breadcrumb is built based on the referer. For example, if a customer performs a search for "shirt" and then clicks on a listing result, the breadcrumb on the product page will be:

```
Home > Search for “shirt” > Casual Shirt
```

To disable this functionality:

```
\Aero\Store\Facades\Breadcrumb::dontUseReferer();
```

Disabling the request

There may be cases (such as an API) where the breadcrumb functionality should not use the request at all:

```
\Aero\Store\Facades\Breadcrumb::dontUseRequest();
```

Removing manufacturer from the product page breadcrumb

By default, the product page breadcrumb contains a crumb entry for the manufacturer. To disable this functionality:

```
\Aero\Catalog\Models\Product::$breadcrumbContainsManufacturer = false;
```
