How do I add a contact form to my storefront?

1. Create the file:

```
themes/acme/resources/forms/contact.twig
```

> Replace `acme` with the name of your theme.

> Any files created inside the `forms` directory can be included on a page using `{% form "contact" %}`.

2. Add the twig:

```
<form action="{{ route('form', 'contact') }}" method="post">
    {{ csrf_field() }}
    <div>
        <label for="name">Name:</label>
        <input id="name" type="text" name="name" autocomplete="name" required
placeholder="First Name" value="{{ old('name') }}">
    </div>
    <div>
        <label for="name">Email Address:</label>
        <input id="email" type="text" name="email" autocomplete="email" required
placeholder="Email Address" value="{{ old('email') }}">
    </div>
    <div>
        <label for="name">Your Message</label>
        <textarea id="message" type="text" name="message" autocomplete="off" required
placeholder="Your message">{{ old('message') }}</textarea>
    </div>
    <div>
        <button type="submit">Submit</button>
    </div>
```

```
</form>
```

3. Display a session success messsage:

```
{% if session('success') %}
    <div role="alert">
        <span>Your message has been sent.</span>
    </div>
{% endif %}
```

Mail Notification

You can create a mail notification in the admin for the `Form Submitted` event (leave `value` empty to target all forms, or put `contact` to target this one specifically)

Then add this to the body of the mail notifcation, to output the submission:

```
{% for field, value in fields %}
    <p>{{ field }}: {{ value }}</p>
{% endfor %}
```
