

How do I add something to the breadcrumb?

You can use the `add()` method to add a crumb:

```
\Aero\Store\Facades\Breadcrumb::add(function (\Aero\Store\Services\Breadcrumb $breadcrumb) {  
    $breadcrumb->add(new \Aero\Store\Crumb('Name', '/url'));  
});
```

You can provide a Closure that returns an `\Aero\Store\Crumb` instance instead if you need to defer until the breadcrumb is rendered.
